The Brush The fundamental tool in Photoshop is the `_Brush_` tool. You can paint with a Brush, adjust size, opacity, and color, and move and delete brushstrokes. The Brush tool can be very sophisticated and feature an unlimited number of options. It is a tool that can help you create a whole variety of professional images. **Figure 1.8A** The Brush tool. First of all, if you are just beginning to use the Brush tool, experiment with brush size and opacity (Figure 1.8B). The opacity determines how transparent or opaque the Brush strokes are. If you want to use a layer that is translucent so you can see the object below, you can create a Brush using the same color as the object. You can start with a layer already in your image or create a new layer for the Brush by pressing the Alt/Option key and clicking the New Layer icon (Figure 1.9). **Figure 1.9** Create a new layer for the Brush by pressing Alt/Option and clicking the New Layer icon. You can use the Brush tool to create images that are painted with lines, with or without texture, or with any other feature you might desire. In addition to using the Brush tool with line art, you can create `_mixed-media brushes_` and use these brushes with `_symbol_`, `_text_`, or `_pattern_` filters. (See the book `_Photoshop CC: The Missing Manual_` for more about symbol and text filters.) * * *

Q: Strange assignment in function I have this bit of code: `-(void) printAllSheetNames: (NSArray *)sheets { // iterate sheets dictionary and print each sheet name in browser for (id key in sheets) { NSArray *keyArray = [sheetNames valueForKey:key]; if (!keyArray) continue; [keyArray enumerateObjectsUsingBlock:^(id obj, NSUInteger idx, BOOL *stop) { NSLog(@"Inside the block %@",obj); }}; [[NSUserDefaults standardUserDefaults] setObject:keyArray forKey:@"sheetNames"]; [[NSUserDefaults standardUserDefaults] synchronize]; } }` In the line: `NSArray *keyArray = [sheetNames valueForKey:key];` I'm getting a really strange warning: Incompatible pointer types assigning to NSArray from id Can anyone explain why? A: You're treating the NSArray returned from the valueForKey method as an object. It's not. It's a pointer to an array of objects. If you want to treat that NSArray as an object, wrap the NSArray in an NSObject and call class method on it. Something like this: `NSArray *keyArray = [sheetNames valueForKey:key]; if (!keyArray) continue; [keyArray enumerateObjectsUsingBlock:^(id obj, NSUInteger idx, BOOL *stop) { NSLog(@"Inside the block %@",obj); }}; NSObject *object = [keyArray objectAtIndex:0]; [object class];`

Q: multiplying only the first letter and number in excel I am looking to multiply only the first letters and numbers in a cell. Example of what I am talking about is like \$1 times \$(2 I hope you understand what I mean. Thanks A: Use the function: `Multiply(cell or range, repl, num)` The "repl" can be any text such as \$(2 The "num" can be a number such as 2

Q: How to create a NSDictionary containing NSStrings for an array without iteration? Is it possible to create a dictionary, where I put every strings in an array, without iterating and thus slowing down my code? A: NSCountedSet is probably what you want. It uses a set, but it can be implemented with a dictionary with an O(1) lookup. Its problem is that it's not quite like a dictionary in that there is no way to remove an object (or anything), so if you try to add a string that has already been added, you'll get an error. You can still use it as a dictionary though because it stores the items ordered by where they were added.

Organelles and the nuclear envelope: their role in nyctohemeral protein expression. We have previously found that the nuclear localization of SV40 large T antigen is cell cycle-dependent and is mediated by a functional interaction with several host cell factors. Since other nuclear proteins are also affected in a similar fashion, a possible relationship between the two phenomena was investigated. We report here that the activity of SV40 large T antigen was markedly reduced in the presence of the nuclear envelope components lamin and LAP2. We propose that this is due to the altered affinity of large T antigen for the nuclear envelope components, and that this may constitute a mechanism by which nyctohemeral protein expression is regulated.

Warm-up Expert Spotlight on SpeedSeries Director Dennis Wolak

We're back again with our expert spotlight this week on SpeedSeries director Dennis Wolak, an expert in warm-up sports psychology. Dennis shares with us some new research findings on the correlation between warm-up knowledge and performance in competition. As a practicing psychologist and a researcher, we are well aware of how much athletes tend to let anxiety and negative thoughts influence their ability to perform to their fullest
