2.1.0Mod Created by Ljargelsjr.website win DB - Download a ModDBMod/Binaries for Carbon Pack 2.1.0Carbon Pack 2.1.0 contains the new Blueprints and instructions from Carbon Brains, the new Cycles from the guy behind Prepon, the progressions from aspring, and a whole lot more This is such a huge mod. It fixes most of the major issues in my previous trunk builds, along with fixing a few bugs that should have never been in it in the first place. INSTRUCTIONS: Either way, place the Carbon Pack zip file in your /steamapps/common/GTA5/1.6.4beta/mods/ and extract the file. Uninstall the previous Carbon Pack release zip before installing the new, because it will overwrite it. Blueprints mods that have blueprints in them are included in this one, but I am leaving the previous Carbon Pack instructions and the previous Carbon Brains blueprint pack instructions separate for those who want only those. The version is Carbon Pack 2.1.0, the available version should be 2.1.2 now. Skyrim DLC: Requires FOMOD installer for Lodderers CC: am a HUGE fan of Carbon Brains work on the game, so I thought it would be cool for me to make a mod pack based on what he is doing, since everyone should be using Carbon Brains framework for their mods. This may or may not be up to date with CycleMeshes. This is mainly intended for people who are creating LOD tracks for Skyrim. It basically does the work for you.
